Summary

Software Engineer with **5+ years of experience** designing and building backend, full-stack, and cloud systems across cybersecurity, healthcare, fintech, and enterprise SaaS. Built microservices, APIs, distributed data systems, and AI-enabled features using Python, Go, TypeScript, Java, React, and AWS. Owned systems from requirements and architecture through development, deployment, monitoring, and performance tuning, while working directly with product and customer-facing teams.

Technical Skills

Languages: Python, Go, TypeScript, JavaScript, Java, C/C++, HTML/CSS

Frontend & Frameworks: React.js, Node.js, Next.js, Django, FastAPI, Spring Boot, Fiber(Go), GraphQL, REST, gRPC, SOAP

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Oracle SQL, Teradata, Amazon DocumentDB

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS, CDK, CloudFormation, IAM, Bedrock), Docker, Kubernetes, Terraform, Jenkins

Testing & Observability: Datadog, Splunk, PyTest, JUnit, Selenium, Postman, Bruno, Performance & Security Testing

Practices & Tools: Microservices, Distributed Systems, Event-Driven Architecture, System Design, Agile, Scrum, Git, Jira

Experience

Software Engineer - Mercor

Jun 2026 – Present

- Built and validated **30+ command-line coding tasks** for **Terminal-Bench 2** using Python, Bash, Linux, Git, and Docker, testing AI agents on repository navigation, code execution, debugging, and multi-step implementation.
- Created task repositories with setup scripts, dependencies, automated tests, and verification logic, taking each task from initial scaffolding through validation and pull-request review.
- Evaluated **50+ coding-agent runs** by reviewing terminal traces, code changes, and test results to identify failures in planning, tool usage, debugging, and code correctness.

Software Engineer - Dune Security

Jan 2026 – Jun 2026

- Built **gRPC** services in **Python/Django** and **Go/Fiber** for AWS Lambda workflows accessing MongoDB, and developed **REST APIs** for other platform services; tested endpoints using **Postman**.
- Deployed and supported containerized services on **AWS ECS and EKS**, with **Lambda** for serverless workflows, **SQS** for asynchronous processing, and **S3** for file storage; monitored APIs and workloads using **CloudWatch** and **Datadog** dashboards and alerts.
- Built a shared data-access library for **MongoDB**, PostgreSQL, and Amazon DocumentDB across **5+ services**; added Redis caching and database indexes, cutting redundant API and database calls by **70%** and improving query performance by **40%**.
- Developed **TypeScript** and **React** features with client-side caching and optimized state management, reducing redundant API requests by **60%** and improving page load time by **90%**.
- Integrated **CrowdStrike**, **Okta MFA**, **Microsoft Entra**, and **Microsoft Defender** into authentication and threat-detection workflows, using **RBAC** to enforce least-privilege access.
- Worked with customer-facing teams to define integration requirements, resolve implementation issues, and build **AWS Bedrock** features for AI-generated security insights.

Software Engineer - Pike Solutions

Jun 2023 – Dec 2025

- Owned the design and delivery of **15+ microservices** and REST APIs in Python and Node.js for fintech, healthcare, and retail applications, reducing system latency by **15%**.
- Built automated deployment workflows using **Jenkins**, **GitHub Actions**, **Docker**, and **Kubernetes**, cutting release cycles by **40%** across development, staging, and production.
- Designed and provisioned multi-region **AWS** infrastructure using **Terraform** and **AWS CDK**, reducing environment setup time by **60%** and standardizing configurations across three environments.
- Redesigned **PostgreSQL** and **MySQL** schemas using composite indexes, query-plan analysis, and connection pooling, improving query performance by up to **50%** under peak load.
- Defined authentication and authorization patterns using **OAuth 2.0**, **JWT**, and **AWS IAM**, supporting **HIPAA** and **PCI-DSS** requirements for healthcare and fintech clients.
- Developed unit, integration, and contract testing using **PyTest**, **Postman**, and **Bruno**, increasing test coverage by **65%** and reducing regressions reaching production.
- Led technical scoping with client, product, and engineering teams, converting business requirements into architecture and implementation plans for **4+ client projects**.

Software Engineer - Indian Servers Pvt Ltd

Apr 2020 – Aug 2021

- Built distributed data-processing services using **Kafka, Spark, and AWS Glue**, processing more than **2 TB of financial data daily** for analytics used by **100+ users**.
- Designed the data storage layer using **Amazon S3 and Redshift**, reducing data-access latency by **40%** and supporting reporting across engineering and business teams.
- Developed **Java/Spring Boot** services and automated **20+ reporting workflows** using **Apache Airflow and AWS Lambda**, supporting configurable daily, weekly, and monthly email delivery while maintaining **99.95% SLA adherence**.
- Built reusable **Terraform and CloudFormation** modules for AWS environments, reducing setup time by **80%** across development, QA, and production.
- Optimized **Redshift** queries and data layouts using distribution styles, sort keys, and partitioning, improving dashboard load times by **35%**.
- Partnered with data scientists to preprocess and clean large-scale financial datasets using Pandas and NumPy, accelerating model training time by 25% and improving feature reliability for downstream predictive analytics pipelines.

Research Assistant - KL University

Jan 2019 – Apr 2020

- Built a cloud-based exam platform using **Java, Spring Boot, and AWS** for the Wipro TalentNext initiative, supporting **5,000+ concurrent users** and reaching **95% adoption**.
- Implemented **JWT authentication**, data encryption, and integrations with **AWS RDS, DynamoDB**, and S3 to secure user and examination data.
- Optimized **SQL queries** and **Angular** rendering, reducing average page-load time by **30%**.
- Set up CI/CD pipelines and built **Splunk** monitoring dashboards with Python-based alerts, enabling **3x faster releases** and reducing incident-resolution time by **40%**.

Education

Westcliff University

Doctorate of Business Administration

Jun 2026 - Present

San Francisco, CA

New York University

Master of Science in Computer Science

Aug 2021 - May 2023

New York, NY

Publications & Certifications

- **Certifications:** AWS Certified Developer - Associate, IBM Python for Data Science, Wipro TalentNext Java Certified
- Catholic Health Band – BBRC Journal
- Opinion Mining Using Social Media – BBRC Journal
